Prior Insight

Prior Insight is our big data platform which we believe can fundamentally alter care and education provision for individuals with complex autism. This is through the insights it can generate about an individual's autism and the condition itself.

Supporting learning delivery

Prior Insight is central in delivering our approach to learning. The platform:

- Contains each young person's individualised timetable across the Waking Day, allowing practitioners to deliver consistency, structure and routine.
- Hosts I Can statements and Support Steps so practitioners can quickly find a young person's skills and the most appropriate and effective techniques to support them to complete activities across their Waking Day.
- Provides a system for practitioners to record data from each activity in the timetable (such as the part-completion of an activity and why the activity was not completed fully on this occasion)
- Presents the data being recorded to allow it to be effectively interpreted and analysed to monitor progress and identify changes required to an individual's personalised learning programme
- Can be updated to reflect learning progress made and with it new or revised I Can statements and Support Steps

Benefits provided

Prior Insight's functions in supporting how we deliver learning means that:

- Young people's skills and interests can be regularly and effectively monitored with learning objectives updated accordingly, to ensure continued, supported progress.
- By having access to the most appropriate structured teaching and Prior Approach techniques for learning situations, practitioners can provide effective support across all settings to encourage development of skills across the Waking Day.
- Learning progress across education, residential and in the community settings can be demonstrated.
