Gender

IDACI – 22/23

The Income Deprivation Affecting Children Index is constructed using the national indicators used in Income Domain of the IMD but applying them to children aged 0-15. At the end of the build process, each LSOA geography is given a 'deprivation score' which in the IDACI actually equates to the % of children in the area affected by income deprivation.

64% of our students life experience is in deciles 1&2.
